

Training Workshop 6 : Summary and Planning for work in the community

Day : 3

Time Required : 1 hour

Purpose

To review what was learned in this training period (Training Workshop 6, Modules 14 & 15) and to plan what to do in the community in the coming month.

Objective

At the end of the session the ASHA will be able to:

1. Explain what work she will be doing in the community after this training period.

Materials

- Bag and mask
- Mucus extractors
- Cotrimoxazole

Preparation

- Ensure the availability of the above material in adequate quantity so that when ASHA goes back to her village, she should carry with her at least three mucus extractors, a bag and mask and 5 bottles of cotrimoxazole.

Training Methods

Question and Answers/Discussion (55 min)

Instructions to Trainers :

1. Ask ASHAs to discuss what new knowledge and skills were learned during this training. (*How to diagnose and manage asphyxia including using the mucus extractor and the bag and mask, how to diagnose and treat sepsis including giving gentamicin injections and cotrimoxazole orally, completing the sepsis management forms, giving home care advice to parents of high-risk infants*).
2. Explain that though ASHA's have received bag and mask, they are not going to start using it on babies. Presently it is meant for practicing the drill of asphyxia management. Inform them that their final evaluation of sepsis and asphyxia management will be conducted in the next Training Workshop. They should regularly revise their reading material on these topics and master the skills by repeated practice. Those who perform satisfactorily in the evaluation will then be provided with the stock of injection and then they can start using it for treating newborn sepsis. They will also start using bag and mask for the management of asphyxia as per need.
3. Add anything that may have been missed.
4. Explain that they are now approaching the end of the training course. ASHAs will be regularly visited by the supervisor twice a month to assess their performance. In these visits supervisors will observe ASHAs doing asphyxia management on a doll and a mock drill of injecting gentamicin.

5. With the help of checklists, supervisors will evaluate their performance in each visit. This will help them correct as necessary and fill in the gaps. Supervisors will record this in the progress book of ASHAs.
6. Remind ASHAs about the records they are going to fill in the villages. Tell them to keep track of the numbers of blank records they have in stock, and to request additional blank records from the supervisors well in advance.

Summary (5 min)

- Ask trainees to explain how they will organize their work in the community to include all the tasks they are expected to do.

Evaluation of the session

Objective	Assessment Method	Output
Explain the work the ASHA will be doing in the community after this training period. All ASHAs go back to their villages with all the material needed to do the work	Questions and answers.	List of ASHAs and materials received by each of them.

Not to give stock of injection gentamicin to anybody in TW6 and in TW7 , they will get gentamicin vial after the certification done by evaluator
